

Dangers of Soy, A Quick Summary

(((including organic)))

by Gerald ... healthwise933@shaw.ca .

Everyone has the right to know - of the existence of a vast database of published scientific studies, all concluding soy is an active hormone disruptor. Hormone disruptors are well-known to be highly toxic to health. Exposure to these toxins is most dangerous during the developmental stages of the fetus, infant, & child. For best health, everyone deserves an opportunity to review the following fraction of the thousands of existing NIH PubMed or Toxnet studies, all revealing severe & sometimes irreversible soy phyto-toxic adverse effects.

Soy has not → does not → can not → Soy will not → prevent cancer
Soy blocks vitamin, mineral, & protein absorption (Osteoporosis)

Soy damages the **Myelin Sheath** around the nerves, spinal cord and brain cells, **MS -- Alzheimer's and Parkinson's Disease**
Genistein and Diadzein in soy are proven to damage DNA and are also classified as Topoisomerase II-**poisons**

Soy **causes** cancer → → Soy **causes** existing cancer cells to grow → → Soy **causes** non-cancerous tumors to turn cancerous

Omega-3 oils → “**prevent**” cancer cells from growing **Soy is an Omega-6 oil**, these oils → “**cause**” cancer cells to grow

. <http://journals.cambridge.org/action/displayAbstract?fromPage=online&aid=898476> . 2002 Abstract

“Flax is the Omega-3 exception.” Flax reacts like an Omega-6 oil, because the ALA in Flax causes cancer cells to grow.

Soy is an endocrine disruptor ... suppresses the thyroid, weakens immune system ... can cause Liver disease ... ♥ **Heart** disease ... leukemia(IAL) ... subtle changes in sexually dimorphic behaviors ... Arthritis ... infertility/lower sex drive ... growth problems ... learning disabilities // Alzheimer's – Parkinson's Disease // M.S. -- from Brain & Nervous System damage ... Osteoporosis ... as well as ... chromosome fragmentation & errors in chromosome orientation ... **Cancer(s)** - breast, bone, uterine, liver, colon, pancreas, thyroid etc ... **DNA damage**. *** Soy is proven toxic & poisonous since 1907, & during Chou Dynasty - 1134-246 BC.

Feeding a baby soy infant formula is proven very risky to a child's health and can be considered as “**child abuse**” because of **Soy's multiple naturally toxic components**; Isoflavone endocrine disruptors: genistein, daidzein, equol, glycitein; and phytic acid, heavy metals, anti-nutrients. Soy naturally blocks proper function in the body of essential enzymes tyrosine & trypsin, which can lead to serious neurological damage, even DEATH. Giving a baby soy formula is estrogenic equivalent to 5 birth control pills/day. You may think you don't eat soy, but only in U.S. is it nearly impossible NOT to swallow it, as **soy is also used as fillers & binders** in nearly all packaged foods. Research proves - Pregnant women whose dietary intake includes soy transfers soy-contamination to her developing fetus. Also see “**Why Babies Should Not Be Fed Soy**” ... <http://www.westonaprice.org/soy-alert/why-babies-should-not-be-fed-soy> ... also see ... “Testimony to CERHR Soy Infant Formula Panel - 39 FDA Codes are Violated by Soy Isoflavones & Soy Anti-nutrients,” Feb. 2010 ... <http://ntp.niehs.nih.gov/ntp/ohat/genistein-soy/SoyFormulaUpdt/pubcom/GailElbek11-28-09.pdf> .

***Remember** ... The life you save just might be the life of the one you ♥ **Love** the most.
